

A family,
driving away
from the worst
storm they
weren't
expecting.

My uncle,
who cannot
afford to pay this
month's electric
bill because he's
been unemployed
for months.

The
Homeless,
who are trying to
find a place to
sleep.

Their car,
abandoned,
because it can't
be charged on the
side of a road.

“Please...help me. I'm losing hope. I
don't know what to do.”

Problems faced on a daily basis. Often, they aren't so subtle and we're left wondering just *what* to do. At times, they aren't so critical but there are other things on our mind.

“When we stop driving, then what? Our home was destroyed. Where do we get gasoline? Where do we go?”

“Our electricity might be turned off so we'll freeze this winter.”

“I hope it's okay for me to be [here]. The shelter kicked me out so I don't have a choice.”

“We're stuck on the side of a road because there's no electric outlet. I guess it can be towed to my brother's house – except I can't charge my car at his apartment complex's parking lot.”

There is no gasoline.

There will be heat.

For the homeless, there will be a home.

It will charge itself – in the middle of nowhere.

It will be, whatever you want it to be.
